

Icon-Making

Have a favorite .bmp file you would like to make into an icon? Well, have your picture file resized and ready to go just the right size. Now go to the file and right click on it and select rename. Replace the .bmp extension with .ico and now your ready to use your icon file anywhere you wish.

To change an icon on the desktop right click and select properties here you will find a button to change the icon. Browse to your new file and walla! Or I like to put this .ico file in my websites. Then when people add my link to their favorites it will also pick up the icon to go with it. Cool!

Now, go Icon crazy! And yes “icon” do it!
